

Futurize your warehouse with ease

For companies striving to get ahead of their industry, we offer an easy way to smarten their warehouse operations.

Our robotic fulfillment solution, backed by a cutting-edge cloud-based software system, helps you keep up with an ever-changing competitive landscape.

Leading the Transition to Automated Warehouses

Caja Robotics was founded in 2014 by experienced technology and logistics professionals with an extensive background in fulfillment center operations. Caja Robotics was created based on experience in the eCommerce retail and logistics market, facing the daily challenges of the order fulfillment process. We recognized there was a need for a warehouse robotics solution that was flexible, scalable, and adapted to the specific challenges and needs of operating a fulfillment center.

Adaptive

Responsive

Scalable

We Believe

To succeed in their market, businesses should have the opportunity to adapt technology with ease, while enjoying flexibility for handling ongoing changes.

Keep Future in order

Advanced algorithms for inventory and order management optimization, i.e. continuous and optimal placement of boxes to achieve shortest order fulfillment and highest throughput. Combining 2 kind of robots and working station increasing performances

Cloud-based fleet management & unique 4D algorithm with AI and deep learning, free-path technology, On the fly optimization of the warehouse

Strong simulation software to accurately predict warehouse performance

8 patents (+ 4 in process) protecting every aspects of the Solution (robots, navigation, optimization, etc.)

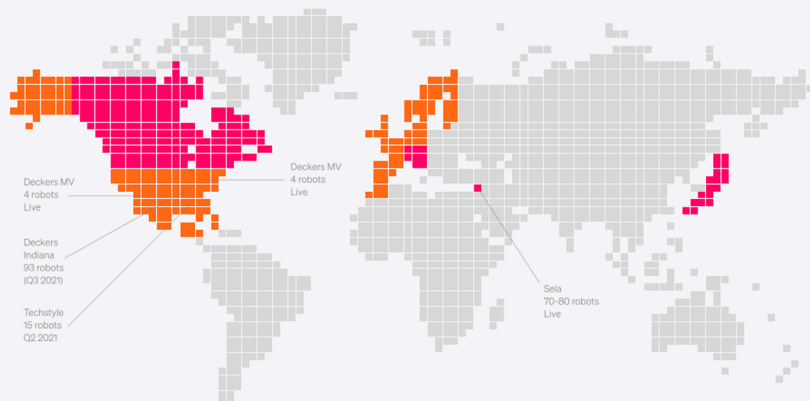

Global Footprint

North America

- 4 live sites in 2021
- Sales team
- AHS partnership (advanced talks with other integrators)

Europe

- Sales team in Germany
- Advanced talks with global 3PLs, retailers and integrators

Japan

Advanced talks with global footwear company and other key local partners such as Sanki Engineering

Israel

- Caja HQ
- 1 active site (Sela)
- Closing with one grocery company and advanced talks with other grocery and 3PL

■ Sales presence (direct or through partners) ■ Key additional markets

Caja's Solution

Software

Advanced AI technology for navigation, fleet management, and inventory optimization

Robots

Specialized robots collaborate and adapt to existing warehouse infrastructure

Picking Stations

Ergonomic and flexible picking stations designed to enhance employee productivity and adapt to changing utilization patterns

navi

Applications

Apparel | eCommerce | Footwear | 3PL | Grocery | Industry | Food & Beverages | Pharma & Health
