

Innovative Intralogistics Solutions - HÖRMANN Logistik and SAFELOG announce Partnership

The constantly growing number of items as well as ever higher requirements for fast and efficient order picking pose new challenges for classic warehouse logistics.

For the space-saving, highly dynamic storage and retrieval of small parts, HÖRMANN Logistik offers customized applications with its AutoStore® solutions. Together with SAFELOG, the range is now being expanded with innovative products and high-performance, future-oriented material flow ideas. In a first cooperation, the pick zone of an AutoStore® warehouse was connected to the packaging line by an AGV shuttle operation at a joint customer.

"We recognized the opportunity to tailor the AutoStore® principle even more individually to the needs of our customers with innovative partners like SAFELOG," explains Steffen Dieterich (Managing Director HÖRMANN Logistik GmbH). And Michael Wolter, owner of SAFELOG GmbH, comments: "Simple integrability, flexibility and maximum availability - with this claim we develop driverless transport systems. This makes us a perfect fit for HÖRMANN Logistik."
